

Eyb Megaswitch® 3.0 Type E

Type E is recommended for the following pickup configurations:

3 single coils

In position 1, 2, 4 and 5 you get the usual Stratocaster* sounds. In the middle position the bridge and neck pickup are in parallel mode similar to the middle position of a Telecaster*. This was not possible with any other switch except earlier versions of the Megaswitch.

humbucker / single coil / single coil (single coils with opposite magnetic polarity)

or

humbucker / single coil / humbucker

In position 1 and 5 either the neck or bridge pickup is on. In the positions 2 and 4 you get the typical Stratocaster sounds. The Megaswitch combines coils with opposite magnetic polarities providing a hum cancelling effect. In the middle position you get the Telecaster sound described above - also hum free.

or

2 humbuckers

In this combination the Megaswitch provides useful single coil sounds in position 2 and 4. Positions 1, 3 and 5 are the same as in the HSH combinations described above.
